YUMICRON

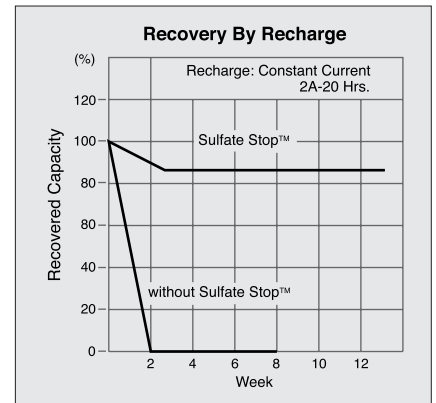

FROM our research shows that 95% of all battery troubles arise from the battery being left for a long the period at a discharged condition. If a battery is left at the discharged condition, a crystal-like material is formed on battery plates' surface which cause a higher resistance to conductivity.

This phenomenon is called "sulfation".

Once a battery has become sulfated it is very difficult to restore the full charge and the battery has to be replaced with a new one.

Yuasa "SULFATE STOP" is the chemical formula incorporated that drastically reduces the sulfate crystal buildup on battery plates' surface and thus tremendously prolongs the life expectancy of the battery and minimizes battery expenses.

SUPER MF

The unique gas recombination system remarkably prolongs battery life in addition to stronger cranking performance.

Yuasa SUPER MF BATTERY was awarded a special prize, as the world's first Maintenance-Free motorcycle battery, at the 1985 International Battery Competition sponsored by Battery Council International held in Toronto, Canada.

SUPERIOR HIGH RATE PERFORMANCE

The electrically low resistant separator and heavyduty plates allow the Yuasa SUPER MF batteries to yield 30% more and faster starting power over conventional batteries.

SHELF LIFE

The special plate material and the bone dry-charge construction enable the storage for nearly 2 years without noticeable loss of charge retention.

CAUTION: SELECT THE CORRECT ELECTROLYTE

Use the YUASA exclusive electrolyte for the first time. Match the battery type, specified in the following table, with ECR code number on the electrolyte bottle.

Do not use if the number is not identical. The use of other numbers or other additive electrolytes may cause the battery plates to become damaged and the battery service life shortened.

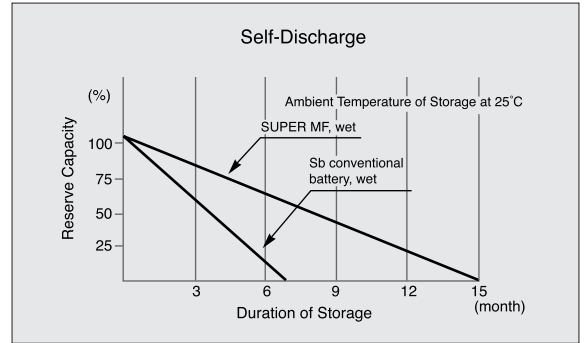

SPECIAL ACID PACK

Yuasa SUPER MF batteries are available for delivery in dry and charged condition for those who stock and resell batteries, with the special acid pack separately supplied, made of strong poly-vinyl tank. This will help batteries kept in the best dry charge condition and fresh for immediate activation.

UN Approval No.2796

LOWEST SELF-DISCHARGE

The calcium grid reduces the self-discharge rate to only 0.2% a day against 0.5-1.0% for conventional batteries.

TOUGHNESS

Even if the batteries are left discharged for considerably long periods, a simple recharge will help restore full charge.
